

IPT-CAMGate

Connecting Existing Cameras to the IPTECHVIEW™ Cloud for Simpler and Safer Access

Get immediate access to a powerful, yet simple-to-use cloud video surveillance platform

Enhance Your Security: A Unique Solution for Camera Protection

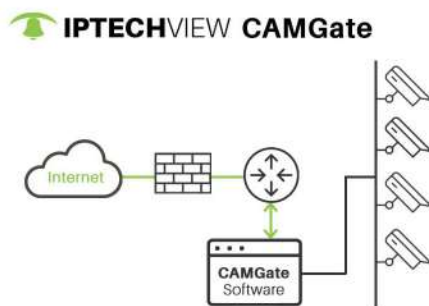

In a landscape where safeguarding your organization's integrity is priority, Imagine a solution that ensures your cameras remain shielded from the vulnerabilities of the public Internet, without requiring cumbersome agent installations or on-premise integration boxes.

Guard Against Vulnerabilities: Elevate Your Security Strategy

It's no secret that certain camera brands lack the robust security features required to thwart potential breaches. These well-received budget-friendly brands may sacrifice security for price, leaving installers and clients grappling with the challenges of maintaining a secure environment.

IPTECHVIEW: Elevating Security and Performance

Enter IPTECHVIEW, the answer to your security needs. Our revolutionary camera gateway, IPT-CAMGate, transcends the constraints of typical solutions. It is meticulously designed to secure, enhance, and extend the life of existing cameras, especially those from brands that exhibit security vulnerabilities.

Seamless Integration, Uncompromised Security

IPT-CAMGate is your fortress, enveloping your cameras in a protective shield that isolates them from external threats. This gateway stands between your cameras and Internet or your corporate network, assuring their inaccessibility. Yet, it doesn't hinder your surveillance capabilities. All video feeds are accessible via our advanced video surveillance platform.

Elevate Performance: Surpassing Limitations

The IPT-CAMGate doesn't just preserve security; it enhances camera performance. It empowers seemingly limited cameras to deliver multiple simultaneous video streams. This innovation boosts their utility, making them more potent tools for remote monitoring and analysis.

IPT-CAMGate is **available as a software package** that can be loaded as an ISO on a server with UBUNTU or on a Windows PC (20GB of storage and 4 GB of RAM minimum) with our installation file that runs it as a virtual image. Once installed, it detects all the cameras on its network and adds them to the customer's account. When connected to the platform, the cameras behave just like any other certified camera on the IPTECHVIEW SURVEILLANCE platform and provide among other things cloud video storage, access to live streams, view cameras on floor plans, customizable grids as well as access over smartphones or computers.

- Easy Plug & Play Cloud Management
- Full Access to GUI through IPTECHVIEW
- Monitoring and Alerting
- No Fixed IP or Port Forwarding Needed
- Rich Monitoring and Alerting Rules
- Security Certificate / Pre-configuration

Beyond Security: A Holistic Approach

With IPTECHVIEW's CAMGate, enjoy a user-friendly interface, streamlined sharing, and simplified management. Our enterprise-class central management system empowers your organization with the ability to manage diverse camera solutions from a single, secure platform.

IPTECHVIEW: Your Gateway to Versatile Surveillance

Elevate your surveillance experience with IPTECHVIEW's CAMGate. It's more than security; it's an enhancement that transforms your cameras into powerful assets. Say goodbye to limitations and embrace a unified, model-agnostic VSaaS and VMS platform.

Explore the future with IPTECHVIEW™ - your partner in advanced security solutions.
