

IPT-CAMViewer-ONE

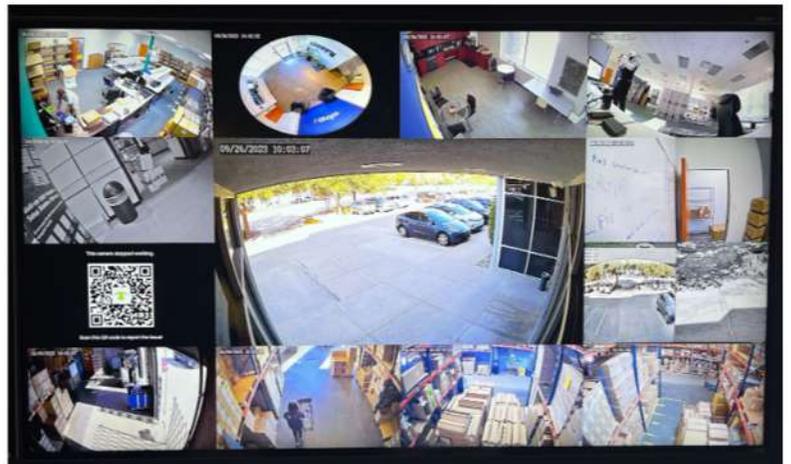

Cloud-managed Live Video Stream Decoder

A game-changer for businesses looking to enhance their surveillance capabilities

This powerful, yet compact appliance is designed so that owners of an IPTECHVIEW SURVEILLANCE (Cloud VMS) can effortlessly see 24/7 live video streams of compatible cameras to any monitor or TV, without needing a PC. With its sleek and elegant design, it seamlessly integrates into any environment.

Although IPTECHVIEW SURVEILLANCE is a cloud-based platform this unit performs its day-to-day visualization as a local device and with local direct connection to the cameras. This reduces bandwidth consumption and provides viewers with high quality and low latency video streams.

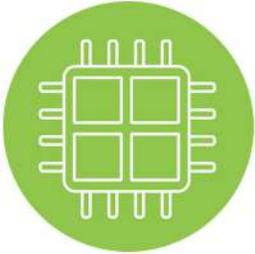

The IPT-CAMViewer-ONE is a true cloud-managed plug-and-play decoder appliance. The unit gets preconfigured and then can be adjusted and set up over IPTECHVIEW SYSTEM's remote management interface. Admins can configure grid layouts for all their CamViewers remotely. The device will then operate like a local system, connect to the cameras, and show local video streams at up to 30 FPS for up to 24 simultaneous video feeds.

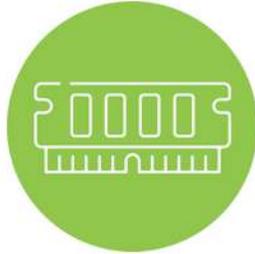

This provides users with natural-looking fast video and a comprehensive situational awareness. It can also be used as a deterrent to show that a high-quality video system is live.

Whether you are monitoring a large office space, a manufacturing facility, or even a retail store, this appliance ensures that you never miss a moment. Its ability to decode main and high-profile H.264 RTSP video streams guarantees crystal-clear image quality, allowing you to see every detail with precision.

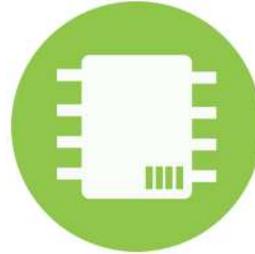

SPECIFICATIONS

Quad-core

4GB/8GB RAM
LPDDR4X@2133MHz

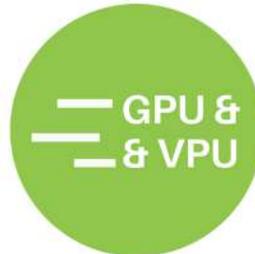

32GB eMMC

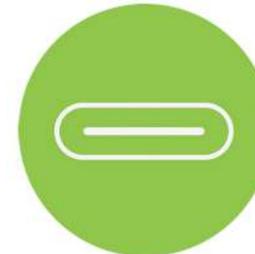

1Gbps Ethernet Port

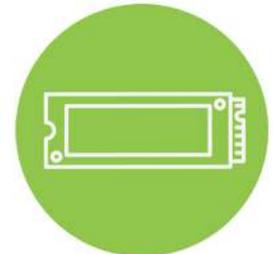

HDMI 2.1
Can play H.265
8k@60P etc

GPU & VPU accelerated

USB-C x1 (Power In)

M.2 NVMe SSD
1x PCIe 2.1

In terms of specifications, this device is truly impressive. With its **cloud-managed** capabilities, you can **easily access and control the appliance remotely**, providing you with flexibility and convenience. The HDMI port supports resolutions of up to **7680x4320 @60Hz**, ensuring that you experience stunning visuals on your display. Powered by a robust **quad-core ARM Cortex processor** and equipped with **8GB LPDDR4X RAM and 32GB eMMC storage**, this appliance is ready to handle even the most demanding surveillance tasks. Additionally, the **2.5G Ethernet port** ensures fast and reliable connectivity, allowing for seamless video streaming.

To top it all off, it comes enclosed in a CNC metal case, providing durability and protection. It is built to withstand the rigors of continuous operation, ensuring that your surveillance system remains up and running at all times.

In conclusion, this live video stream decoder is the smart choice for businesses seeking a reliable and efficient solution for their video surveillance needs. Its ability to seamlessly connect to TVs or monitors, the capability to display up to 24 live video feeds, and the powerful specifications make it an invaluable asset.

Add IPT-CAMViewer-ONE to your deployment to take your surveillance capabilities to the next level.
